Reach Regulations – Newport Industries Ltd

The EU Commission has recently agreed a European regulation on chemicals, entitled REACH (Registration, Evaluation, and Authorisation of Chemicals).

REACH pre-registration will commence on June 1st 2008 and Newport Industries Ltd is already working towards this.

During the REACH legislative process the chemical industry expressed general concern about the potential of some chemical substances to be withdrawn from the European market as a consequence of REACH, either due to regulatory action or commercial considerations, and the impact this may have for downstream users. As a supplier to downstream users, Newport Industries Ltd strongly shares this concern.

We would like to assure you that all our regular chemical substances will be properly pre-registered under REACH.

We are confident that the transitional period will give you, our customer, and us sufficient time to find satisfactory solutions for the preparations of our respective registration and future legal compliance under REACH.

Should you have any concern or require any further information on above, please contact our Reach Team below.
